# Connecting the dots for knowing the risks in Bosnia and Herzegovina

# Disaster Risk Analysis System (DRAS)

## DISASTER RISK ANALYSIS SYSTEM (DRAS)

DRAS is an online platform created with the aim to change the approach to disaster risk reduction (DRR) in Bosnia and Herzegovina by providing accurate information to decision makers and citizens about exposure to floods, landslides, earthquakes and mine suspected areas.

DRAS has been developed within the United Nations Development Programme (UNDP). The system allows free access to scientific floods and landslide hazard data to decision makers and citizens in order to increase disaster risk awareness for specific locality. DRAS is available for cities Doboj and Tuzla, and under the development for Brčko Distrikt BiH, Goražde, Laktaši, Livno, Lukavac, Maglaj, Mrkonjić Grad, Odžak, Vareš and Zvornik. DRAS consists of 3 Modules. Module 1 being publicly available; while Modules 2 and 3 are accessible to respective local authorities in accordance with their user rights. System can be accessed via the following link: <http://dras.undp.ba/>

### DONORS

Government of  
Republic of Turkey

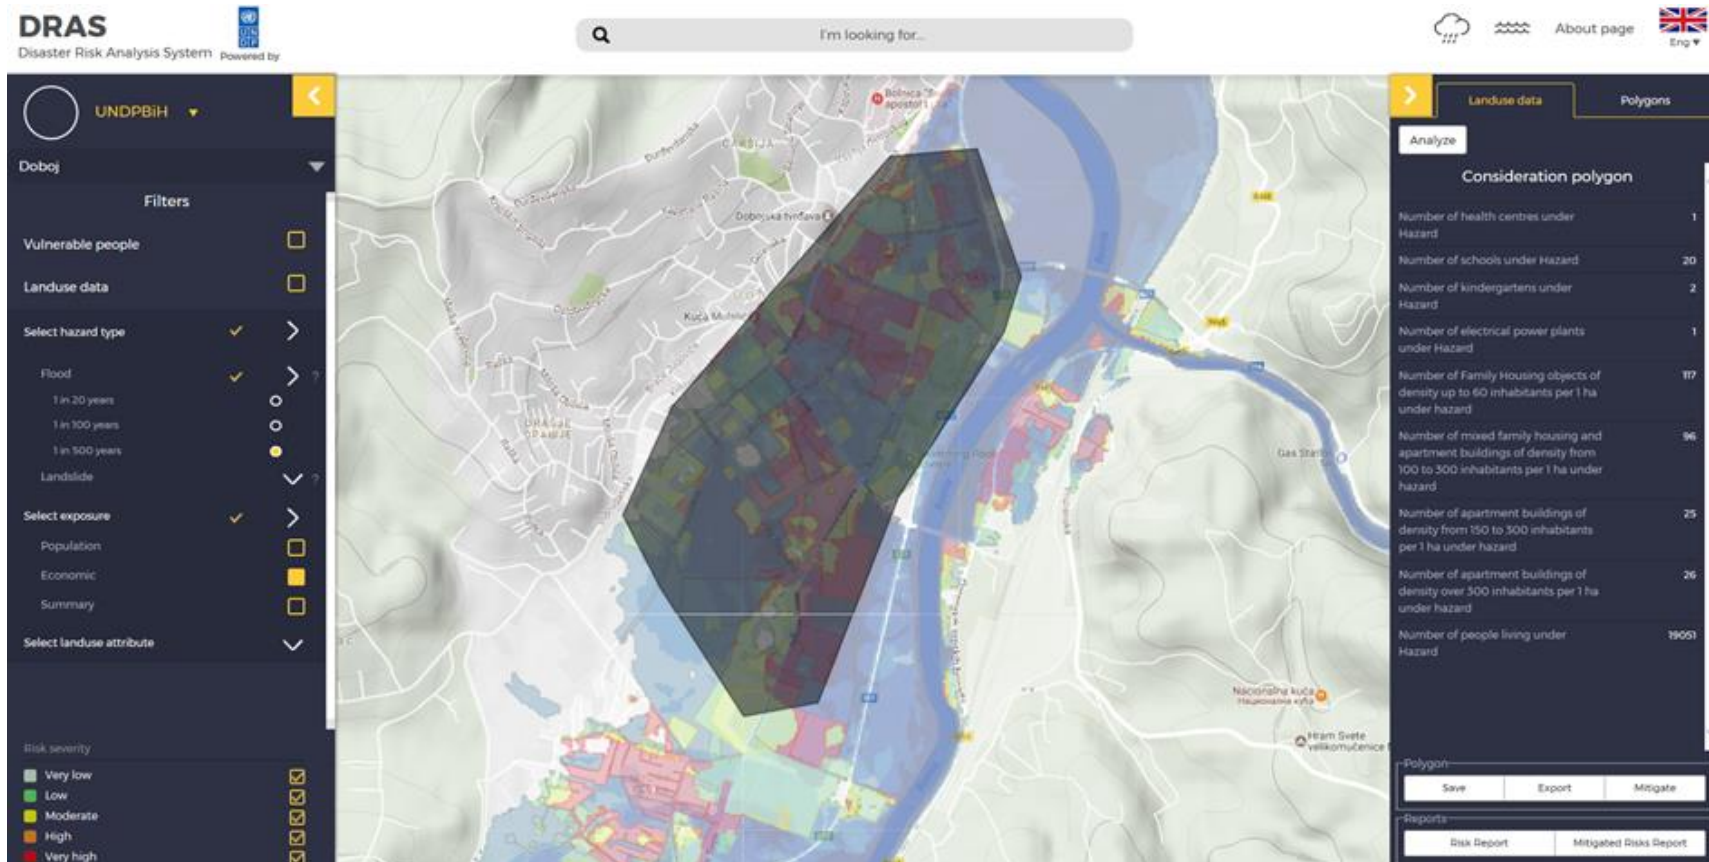

### Module 1:

- Uses hazard maps and projects them on a publicly available Google maps that citizens can easily search and use it.
- Linked to precipitation and water level data publicly available from Hydrometeorology and Water Agencies which provides additional information and awareness raising to citizens.

## Resilience

*Empowered lives.  
Resilient nations.*

True opportunity to create resilience is in citizens themselves and municipalities

BiH already has solid scientific data on hazards, exposure, and vulnerabilities. The main challenge is a lack of systematic data collection, exchange of information among different stakeholders, and translating the available data into action.

New technologies can bridge the gap

Resilient nations.*

## Disaster Risk Analysis System (DRAS)

DRAS is an online platform <http://dras.undp.ba/>

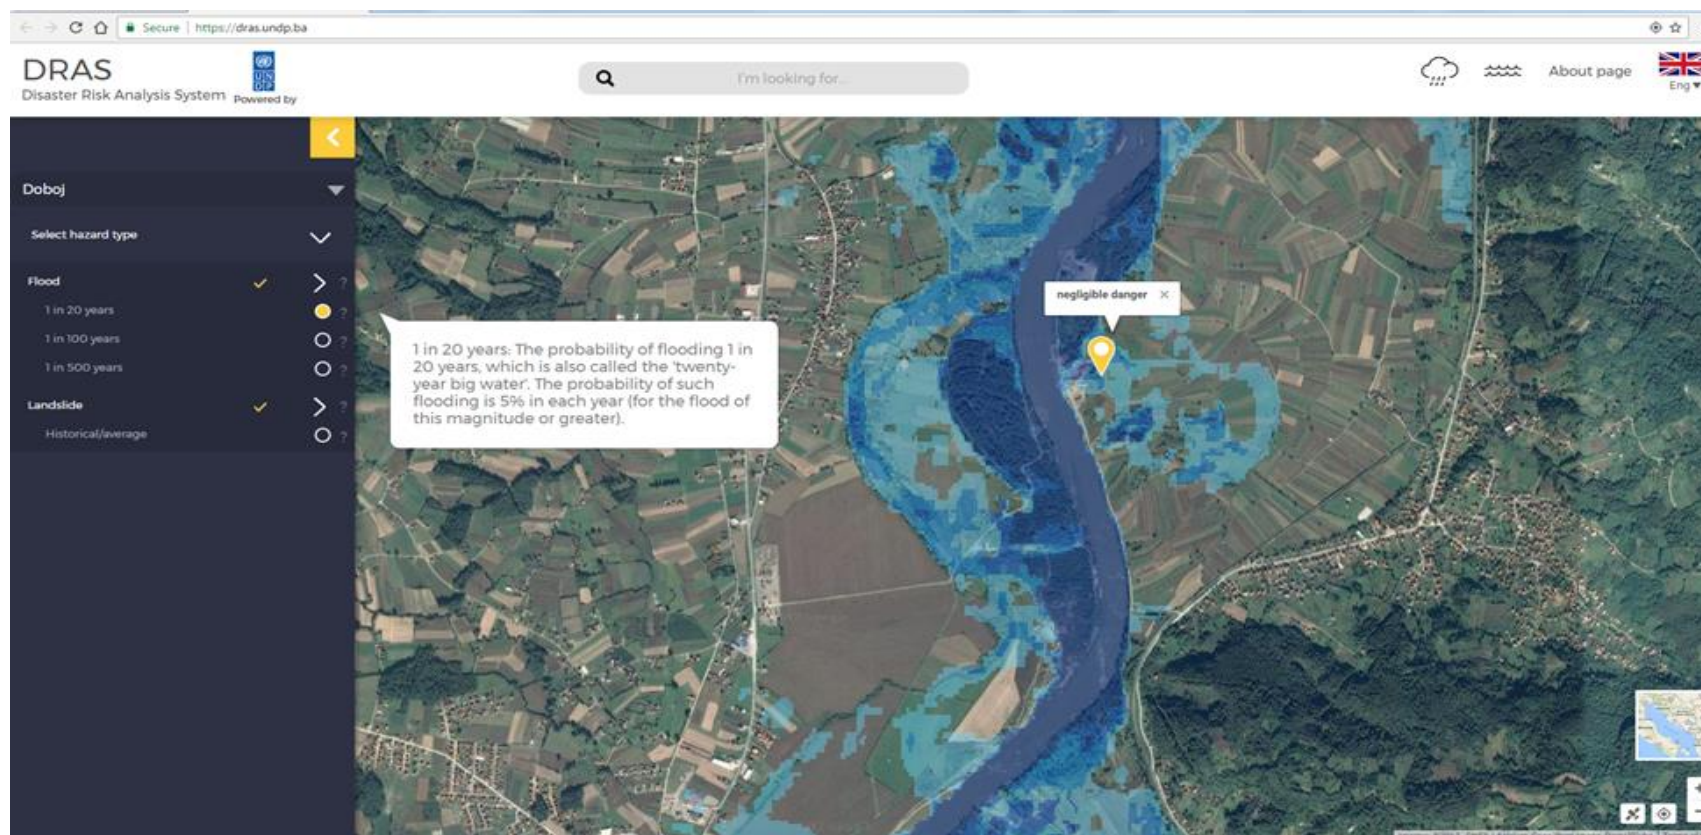

DRAS consists of 3 Modules

Allows free access to scientific data on landslides and floods hazard (soon earthquakes and mines)

Helps decision makers in preparation of planning documents and risk assessments that combine spatial data, hazards, land use and data on vulnerable population

DRAS is available for 2 cities and under the development for 10 municipalities.

## Flood risk calculation

The individual risk maps are obtained by multiplying the value of vulnerable categories:

- |                                      |             |
|--------------------------------------|-------------|
| 1. population,                       | 0.40 (40%)  |
| 2. economy,                          | 0.35 (35%)  |
| 3. protected areas,                  | 0.15 (15%)  |
| 4. cultural and historical heritage, | 0.10 (10%)  |
| 5. *IPPC facilities,                 | no category |

with the weight factor and the hazard map values.

$$RF = S_n \cdot WF \cdot H$$

RF – risk factor, n – number of dots, km ili km<sup>2</sup>, TF – weight factor, H – hazard.

Summary risk map is obtained by summing the individual values of all vulnerable categories, adjusted with relative risk factors for each category.

\*IPPC facilities - facilities and plants that could cause sudden water contamination in the event of a flood (chemical, metal, energy, waste management ...)

### Population

Faktor rizika	Klasa	Kategorija rizika
0-49	0	Zanemariv rizik
50-499	$0 < R < 0,25$	Nizak rizik
500-999	$0,25 < R < 0,50$	Umjeren rizik
1.000-1.499	$0,50 < R < 0,75$	Visok rizik
$\geq 1.500$	$0,75 < R < 1,0$	Ekstremni rizik

### Economy

Faktor rizika	Klasa	Kategorija rizika
0-49	0	Zanemariv rizik
50-249	$0 < R < 0,33$	Nizak rizik
250-499	$0,33 < R < 0,67$	Visok rizik
$\geq 500$	$0,67 < R < 1,0$	Ekstremni rizik

### Cultural and historical heritage

Faktor rizika	Klasa	Kategorija rizika
0-499	0	Zanemariv rizik
500-3.499	$0 < R < 0,25$	Nizak rizik
3.500-6.999	$0,25 < R < 0,50$	Umjeren rizik
7.000-9.999	$0,50 < R < 0,75$	Visok rizik
$\geq 10.000$	$0,75 < R < 1,0$	Ekstremni rizik

### Protected areas

Faktor rizika	Klasa	Kategorija rizika
0-499	0	Zanemariv rizik
500-1.499	$0 < R < 0,33$	Nizak rizik
1.500-2.499	$0,33 < R < 0,67$	Visok rizik
$\geq 1.500$	$0,67 < R < 1,0$	Ekstremni rizik

### IPPC facilities

Faktor rizika	Klasa	Kategorija rizika
0-149	0	Zanemariv rizik
150-299	$0 < R < 0,50$	Visok rizik
$\geq 300$	$0,50 < R < 1,0$	Ekstremni rizik

### Summary risk map

Klasa (RF)	Kategorija rizika
0	Zanemariv rizik
$0 < R < 0,25$	Nizak rizik
$0,25 < R < 0,50$	Umjeren rizik
$0,50 < R < 0,75$	Visok rizik
$0,75 < R < 1,0$	Ekstremni rizik

## Calculation of population risk

Number of people

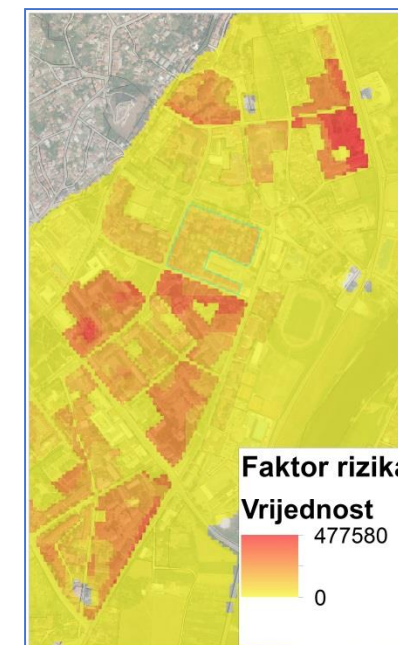

× 100 (WF) ×

Hazard (value)

=

Reclassification

Faktor rizika	Klasa	Kategorija rizika
0-49	0	Zanemariv rizik
50-499	$0 < R < 0,25$	Nizak rizik
500-999	$0,25 < R < 0,50$	Umjeren rizik
1.000-1.499	$0,50 < R < 0,75$	Visok rizik
$\geq 1.500$	$0,75 < R < 1,0$	Ekstremni rizik

### Population risk

332 (number of people) x 100 (WF) x 1,5 (hazard) = 49800 (FR) → reclassification 1  
EXSTREME RISK

## Calculation of economy risk

### Categories:

- Social objects (schools, hospitals, nursing home for elderly people, cultural centre ...)
- Municipal infrastructure and production and business activities (gas station, factory, heating facility ...)
- Housing (housing density - individually, mixed and multiple housing)
- Traffic (motorway, regional road, highway ...)
- Natural areas (agricultural land, forests, water areas ...)

Polygons – unit of measure

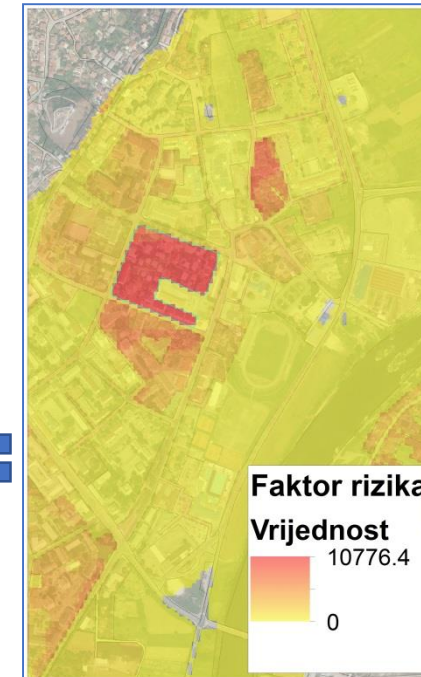

Hazard (values)

×(WF)×

=

### Reclassification

Faktor rizika	Klasa	Kategorija rizika
0-49	0	Zanemariv rizik
50-249	$0 < R < 0,33$	Nizak rizik
250-499	$0,33 < R < 0,67$	Visok rizik
$\geq 500$	$0,67 < R < 1,0$	Ekstremni rizik

**Economy:** 41 (number of objects) x 80 (WF) x 1,5 (hazard) = 4920 (FR – risk factor) → reclassification 1 - EKSTREME RISK

## Calculation of IPPC risk

Number of IPPC

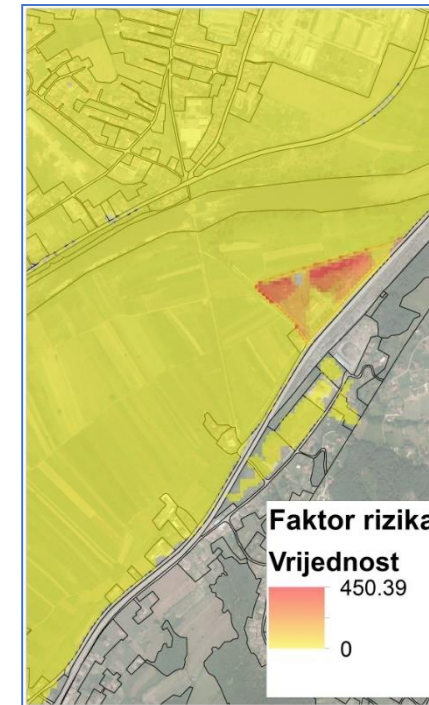

× (WF)  
100 ×

Hazard (value)

=

Reclassification

Faktor rizika	Klasa	Kategorija rizika
0-149	0	Zanemariv rizik
150-299	$0 < R < 0,50$	Visok rizik
$\geq 300$	$0,50 < R < 1,0$	Ekstremni rizik

IPPC risk

1 (facility) x 100 (WF) x 2,99 (hazard) = 299 (FR) → reclassification 0,50 - HIGH RISK

## Calculation of cultural-historical risk and protected area risk

### Reclassification

Faktor rizika	Klasa	Kategorija rizika
0-499	0	Zanemariv rizik
500-3.499	$0 < R < 0,25$	Nizak rizik
3.500-6.999	$0,25 < R < 0,50$	Umjeren rizik
7.000-9.999	$0,50 < R < 0,75$	Visok rizik
$\geq 10.000$	$0,75 < R < 1,0$	Ekstremni rizik

### Cultural-historical heritage

Number of protected objects (polygon)  $\times$  TF  $\times$  Hazard (value) = Faktor rizika  $\rightarrow$  Economy risk

**CH:** 1 (monument) x 95 (WF) x 1,5 (hazard) = 142.5 (FR)  $\rightarrow$  reclassification 0 - NEGLIGIBLE RISK

### Reclassification

Faktor rizika	Klasa	Kategorija rizika
0-499	0	Zanemariv rizik
500-1.499	$0 < R < 0,33$	Nizak rizik
1.500-2.499	$0,33 < R < 0,67$	Visok rizik
$\geq 1.500$	$0,67 < R < 1,0$	Ekstremni rizik

### Protected area

Area PA (polygon)  $\times$  W  $\times$  Hazard (value) = Risk factor  $\rightarrow$  Economy risk

**PA:** 10 km<sup>2</sup> (protected area) x 50 (WF) x 2,99 (Hazard) = 1499 (RF)  $\rightarrow$  reclassification 0,33 - LOW RISK

## Summary risk

Risk class for  
population x 0.4

+

Risk class for  
economy x 0.35

+

Risk class for  
cultural-  
historical  
heritage x 0.1

## **Future for DRAS**

Institutionalizing DRAS to 10 additional municipalities (in total 22 by 2020). DRAS is affordable tool and easy to use.

Possibility to be introduced in other countries in the region.

Introduction of fire hazard and risk data as well as environmental sensitivity risk.

Familiarizing more advanced users such as insurances, International Financial Institutions (IFIs), investors and private businesses with DRAS features to unlock greater funding for DRR.

We want to make DRAS ones to-shop for increasing resilience.
