SANSA’S CONTRIBUTIONS TOWARDS DISASTER MANAGEMENT

By Paida Mangara
Definition: Disaster Management – ‘a continuous and integrated multi-sectoral, multi-disciplinary process of planning and implementation of measures aimed at

- Preventing or reducing the risk of disasters;
- Mitigating the severity or consequences of disasters;
- Emergency preparedness;
- A rapid and effective response to disasters; and
- Post-disaster recovery and rehabilitation’

(SA Disaster Management Act 57 of 2002)

- The act calls for a “significantly strengthened capacity to track, collate, monitor and disseminate information on phenomena and activities…”

(SA Disaster Management Act 57 of 2002)
Earth Observation plays a central role in various aspects of disaster management such as Monitoring, Hazard Analysis, Vulnerability- and Damage Assessment, Contingency Planning, Reporting Systems as well as Early Warning Systems.

Near real time satellite derived information is critical to decision-making and provision of disaster relief.

Provision of immediate disaster relief can be enhanced through the provision of accurate satellite derived maps that can be used for assessment of the situation to enable logistical support.
SA Historical Disaster Events – Geographical Distribution

Disaster Atlas - SRS Dataset

Legend:
- Drought
- Earthquake
- Epidemic
- Extreme Temperature
- Fire
- Flood
- Technological Hazard
- Hall
- Rain
- Snow
- Transport Accident
- Storm
- Tornado
- Wind

2012 UR Forum Mapping Global Risk
Disaster Management is one of SANSA’s thematic areas.
SumbandilaSat images show impact of flooding, Oshakati Namibia: April 2011
Flood detection and monitoring using SPOT Imagery: Limpopo River

2012 UR Forum Mapping Global Risk
Disaster Monitoring in Japan using Sumbandilasat
Fire detection
Fire scar mapping & damage assessment

Pre-fire TM image

Post-fire TM image

Fire scar
Active Fire Detection System (AFIS)

- Designed to detect and display active fires onto a map with each MODIS satellite overpass.
- System operating on the internet in a Web GIS environment.
- Quick SMS Alert System informs Fire Protection Association managers of fires within their areas within minutes of fire breakouts with each MODIS satellite overpass.
Disaster Management: Advanced Fire Information System

MODIS – 50m*50m fires, 10:00 and 14:00
MSG – 500m*500m, every 15mins
65 % of all fires are detected
Water quality assessment - eutrophication

2012 UR Forum Mapping Global Risk
Vision: Seeing Earth Observation Feeding into the National Disaster Management Information System (NDMIS)
